HARDGRASS

RANCH RAISED ... RANCH READY

Bull Sale

WINTERING OPTION

With the ongoing drought and feed shortages in most of the prairies we recognize the challenges involved in sourcing and putting up enough feed for the cow herd this winter. Hardgrass Bull Sale would like to offer our customers the option to have us take the bulls home to be fed this winter on maintenance forage ration. Bulls would be semen tested and delivered after the 15th of March.

We will require that these bulls be insured through us at the Hardgrass Bull Sale to protect your investment. Insurance will be calculated at 15% of purchase price and due on sale day. Any bulls that are taken home sale day will be discounted \$250 per head off purchase price.

Welcome to our 10th Annual Sale

Welcome to the 10th Annual Hardgrass Bull Sale, on behalf of everyone we would like to thank our past customers for their support, we wouldn't be here without you. We would also like to thank Leonard Retzlaff of Saddleridge for his excellent care of our cattle. With the low rainfall this spring the decision was made to leave the bulls on feed at Saddleridge on a forage ration. Leonard has done an excellent job of slowly growing these bulls to their full potential.

No one in the prairie provinces has been untouched by the current drought, thankfully the market is at an all time high. There have been record levels of cows leaving the national cow herd and this trend will likely continue until we see a correction of the drought conditions. We recognize that with a strong supply of quality bulls available in our area and smaller national cow herd that competition is high. In saying that we have brought a select group of bulls to town that have been rigorously sorted and culled, we are quite proud of this group of bulls. These bulls are the top performers in our hard grass environment out of cows that can get it done in a tough year.

HARDGRASS *RANCH RAISED ... RANCH READY* Bull Sale

WE WILL BE RETAINING A SEMEN INTEREST IN ALL CATALOGED BULLS FOR IN HERD USE ONLY
BULLS WILL BE COLLECTED AT OWNER'S CONVENIENCE AND AT OUR EXPENSE

R&W CATTLE CO. UPDATE

Although we don't have bulls in this fall's sale we thought we would offer a quick update. Due to high demand just prior to and during the breeding season for yearling bulls this summer we let a fair few of our sale sort go. For those interested we have decided to winter the remainder of the bulls which will be on offer in the spring as full 2 year olds. Thanks to everyone for their faith in our program, hope to see you in the spring.

Cavalry was purchased from Stevenson Angus in Montana fall of 2019. He has shown to have extremely consistent calving ease and low to moderate birthweights in his progeny. He is a very efficient easy keeper with plenty of length and thickness. He has a tremendous gap in his growth EPDs that he passes on to his offspring, as well as his quiet easy going nature.

It is a pleasure to be working with the Hardgrass Bull Sale group that is truly a family affair who all ranch in the heart of "hard grass" country. These operations operate independently on the day to day activities but share a common goal in raising the best cattle they can in some of the most unforgiving areas Canada has to offer. The passion which drives these operations is evident in the nonstop pursuit to find out what genetics will deliver what their environment calls for. Through this search you will find that "balance" is critical as too much of anything can be detrimental. The genetics put forward each and every year come from the same need to just doing the basics right with overall function being the trump card. For you their customer, it is imperative that the bulls you select accomplish what you have asked from them. These outfits cull hard, research relentlessly from the time these calves are born until the day they're presented for sale, and of course how they then perform in their new settings. Your satisfaction is of the utmost importance and with viewing the 2023 sale offering one has to be impressed.

A quote which I think we can all appreciate is that "a drought makes for the best cowherd" well that is evident as all facets of production have been challenged. The cattle have cleared the hoops and with the market being where it is now and the low inventory numbers makes for exciting times ahead. The years of planning are coming into fruition.

Join us December 4th to evaluate this set of ranch raised bulls and explore their qualities. Should you have any questions on the offering feel welcome to reach out to the sale group or ourselves at Castlerock Marketing, we are here to assist should you have any questions on the bulls.

See you sale day!

Shane Castle

FLYING U CATTLE CO.

STRATTON & ADRIENNE PEAKE • DOROTHY, ALBERTA • 403-633-0815
sapeake@hotmail.com

I have always had a philosophy about raising cattle. Make a set of rules of things you can not tolerate in your cow herd and get rid of the problems, my cows should work for me, not me for them. A fellow purebred breeder and friend said raise good cows and the bulls are easy after that. Sourcing new genetics that adhere to these principles is challenging and interesting. My goal in this business is the success and satisfaction of my customers, for me to succeed they must as well. I hope this drought ends and the cattle market stays hot. Hope to see you at the sale.

WADE CATTLE CO.

MARTINA & STEVEN WADE • DRUMHELLER, ALBERTA • 403-820-1715

martinapeake@hotmail.com

On behalf of Steve, Dean and myself we would like to thank you for your interest in our program. We are located 20 minutes SE of Drumheller in the wintering hills of Dalum, AB. Our program goals are to produce an efficient, fertile, sound and productive cow herd. For the last three years the bred heifers have been exposed for 30 days and the main cow herd is bred AI for one cycle and then only exposed to the bull for a cycle, if they are open, they go to town. We are quite pleased with the improvements that we have seen in the quality of our cow herd, and we will always strive for more. The bulls on offer have met the standards that I require if I was to use them in herd, they are the top cut of the calf crop and are built to thrive in the environment where we live and ranch.

A powerful Resolve son out of a nice coming 4-year-old Bronc daughter. His grandam, 424B a coming ten-year-old next spring. Sge has excellent fertility settling first service on 8 head and is pregnant with her 9th calf, she has 5 daughters retained in herd and 2 granddaughters. With Renown and the Coleman Donna 714 cow on his top side and proven maternal staying power on the bottom this is a bull with an excellent blend of performance and maternal strength. Half brother working at Walton Cattle Company Ltd.

Here is a heifer bull that also goes back to the 424B cow, his dam is a nice long bodied cow with a tidy udder and great feet. He is long bodied and smooth and will be able to cover big country. With a 69 lb. birth weight he is heifer safe and at weaning time he had an actual weaning weight of 615 lbs. at 199 days of age from a 2-year-old heifer.

Here is a Stellar with a lot of depth and capacity with excellent pre-weaning growth, he weighed 733 lbs. at 202 days. His sire is known in the industry for siring cattle with great feet and after calving out Stellar's first daughters I can say he is an udder improver especially in reduction of teat size. This bull will sire moderate cattle with excellent early growth.

Both these bulls showed very early signs of high testosterone and excellent testicle shape, they also were the first to shed in the spring. They both have excellent feet. The 32K bull has a bit more power in his build with a nice strong topline, especially in his front 1/3. The 36K bull is a bit more moderate in design but a touch smoother made with definite eye appeal and is very correct in his makeup. These bulls had excellent early growth to weaning with adjusted weaning weights of 736 lbs. and 718 lbs. With the combination of Stellar on the top and Leachman Right Time on the bottom these bulls will both sire daughters that will last.

LOTS 32 & 33

MAT. SISTER

MAT. BROTHER

DAM AGE 18

Deer River Idelette 132P is a Leachman Right Time Daughter that we purchased from Carl and Lee Beasley in the fall of 2009. She raised 16 natural born calves all first cycle conception, the last 12 all A.I. sired, I flushed her the summer of 2021 and got 9 grade 1 embryos and she weaned a 645 lb. bull calf at the age of 17. She changed environments three times in her lifetime and never skipped a beat and at 18 was still excellent footed, uddered and sound. If you are looking to add fertility and longevity to your herd these two ET sons of Stellar would be an excellent choice. She has raised sons that have sold to R&W Cattle Company, Ed Curry Ranching, Bruce Pierson and C & L Beasley Cattle Ltd. as well as two retained for in herd use.

Terms & Conditions

TERMS OF SALE: The terms of the sale are cash or cheque, payable at par at the sale location. The right of property shall not pass until after settlement has been made; no invoicing on buyers in attendance, unless previous arrangements have been made. Every animal sells to the highest bidder and in case of disputes, the auctioneer's decision will be final. We reserve the right to withhold animals from export shipment for whom payments have not been received prior to departure times.

BREEDING GUARANTEE: All purebred cattle are sound and right and sell with a responsible breeder guarantee of satisfaction. In the event of any unlikely dispute, the regular terms and conditions, standard with the Canadian Aberdeen Angus Association, shall apply. The consignors will not, however, provide replacement or adjustment for physical injury or mismanagement. We therefore stress the importance of insurance on bulls. At no time shall the seller's liability exceed the purchase price of any animal.

CATTLE INSPECTION: All carry identity tags, corresponding to Sale Lot Numbers. All shall be available for inspection prior to the sale.

ANNOUNCEMENTS: Errors discovered in the catalog will be corrected from the auction stand at sale time and will take precedence over the printed matter in the catalog.

SIGHT UNSEEN BIDS: May be entrusted in complete confidence to any of the consignors or sale staff listed.

INSURANCE: Ownership risk to purchaser commences when the Auctioneer's hammer falls. Livestock coverage will be available at the clerks desk from representatives on Sale Day.

ALL PERSONS who attend the Sale do so at their own risk, and the owners, Management and Sale Staff assume no liability, legal or otherwise, for property loss or for any accidents that may occur.

Please bring this catalog with you to the Sale

The Bull Breeding Soundness Evaluation

More than just a date with a probe . . .

The WHO?

Breeding soundness examinations should be performed on all bulls to be used for breeding.

The WHY?

Economics... When comparing heritable traits, fertility is 10 times as important as carcass quality and 5 times as important as rate of gain. Although female fertility is important, the herd sire bears the majority of the herd's fertility responsibility – the law of ratios! It is estimated that 1 out of every 5 bulls is sub-fertile, so avoid the surprise in the fall of open or late cows and get those bulls tested.

The HOW?

Libido and serving capacity are UNASSESSED in the routine breeding soundness exam!!! It is important for producers to monitor breeding activity when the bull is put with cycling females

Palpation of both testicles is essential; the testicles should be firm, move freely within the scrotum and there should be no irregular swellings. The scrotum is also examined for any injuries (for example, frost bite) and excess fat deposits that can affect thermoregulation. The ideal scrotal shape is pendulous with a definite neck (smaller testicles and excess fat usually alter scrotal shape). There is a reason why scrotal circumference measurements are performed!! Scrotal circumference measurements are highly correlated to testis weight, daily sperm production and high semen quality traits. Larger scrotal circumferences in bulls are associated with earlier age at puberty in heifers. See, size does matter!!! Transrectal internal examination focuses on accessory sex glands and inguinal rings. Enlarged sex glands can be a sign of inflammation with secondary infection.

Semen quality is a big focus of the exam. Ejaculate volume, semen density and motility (gross and individual) and sperm morphology are all evaluated. Density and motility are assessed using a microscope. There is power in sperm numbers and if the sperm are not moving well, they will not make it to fertilize the egg! Individual sperm are examined under a higher magnification on a stained slide for abnormalities.

Sperm Abnormalities... The easiest way to understand this is to think of an individual sperm in sections. Abnormalities can affect each section of the sperm – the head, the midpiece, the tail (principle piece) and the acrosome (top part of the head). There can also be 'broken sperm' with the head separated or detached and droplets that are usually lost from the sperm can still be present. Sperm abnormalities are usually classified as either Primary or Secondary and are based on where the defect originates during spermatogenesis.

It is important to remember that Spermatogenesis is an ONGOING thing! Sperm are constantly being produced in a continuous cycle. The causes of disturbing spermatogenesis are usually heat or stress related (less common causes are genetic, toxic and nutritional deficiencies). Both heat and stress lower levels of testosterone which affects sperm production.

The WHEN?

Weather can have an effect on a breeding soundness exam. Warmer days are always better because there is less chance for false negatives from environmental effects. Sperm can get 'shocked' on a cold day and motility can be greatly decreased. Since annual vaccines are commonly administered to bulls at the time of semen testing, it is good to test about 3 to 4 weeks before breeding season.

The WHAT?

Bulls that are classified as SATISFACTORY potential breeders mean they have met all of the minimum requirements for physical soundness and semen quality – remember, watch for sex drive and mating ability!! QUESTIONABLE bulls would most likely impregnate cows but fertility is expected to be slightly below normal or there is a risk of transmitting undesirable traits to offspring. The DECISION DEFERRED classification is usually given to pubertal bulls with poor semen quality because at sexual maturity semen quality should improve. It is also used in mature bulls that have suffered a disturbance in spermatogenesis, such as frost bite damage, which should recover before the breeding season. UNSATISFACTORY is given to bulls that are expected to result in poor fertility in the cow herd.

It is always important to remember that when doing a breeding soundness exam, we use a 'snapshot in time' to evaluate a continuous 'motion movie picture'. Spermatogenesis is constantly happening and bulls are subjected to numerous things on a daily basis that can affect this. Just because your toe doesn't hurt today, doesn't mean you won't stub it on the tractor tomorrow . . .

Ballads of the Badlands

CIRCUS COULEE

by Arthur Peake - 1866 - 1947 - Pioneer in the Dorothy Area

Did you ever hear of the Circus
Out on the big Red Deer?
A coulee just like a theatre
With seats that rise tier above tier.

It was named by an early settler
But it had been named before
By the Crees and the halfbreed hunters,
Who used to call it "The Store".

For when they came up from the Bullpound
And circled 'round Little Fish Lake
And never a buffalo they could find
Why straight for the coulee they'd make.

And there 'midst the hills and the hollows
Of the comical hole in the ground
They say the hungry Indian
Some buffalo always found.

But when it became a cattle range
'Twas more of a circus than a store
And many a play was acted strange
That nobody ever saw.

A rider went up one morning,
Not a saddle horse in sight,
Three trips and he couldn't find them
And yet they were there alright.

Then after the Fl yearlings
Went Taylor, Kelly and Dunn;
They rode right through the coulee
And came out with never a one.

And yet in the tongue of the coulee
'Midst the brush and grass did lie
Nearly eighty head of yearlings -
They certainly passed them by.

Looking down into the coulee
A pile of stones you'll see
Where they buried a Kootenai Indian
Killed by the warlike Cree.

Sitting up there in his wonder lodge,
Gazing down below,
To dream of the happy hunting grounds
And follow the buffalo.

I wonder if his ghost is there,
And if so, can it see
Right at the mouth of the coulee
The town of Dorothy?

But if he sees the Fire Cart,
And hears the whistle roar
I bet his ghost will quit the hills
And wait for nothing more.
